HYBRID LIFTS
Designed by You, Manufactured by Harmar

Harmar

AUTO LIFTS | STAIR LIFTS | INCLINE PLATFORM LIFTS | VERTICAL PLATFORM LIFTS
Harmar’s Hybrid Lifts combine the best of outside and inside lifts. The loading platform offers drive-on/drive-off convenience with the ability to lift the power chair or scooter automatically into the vehicle’s cargo space for storage and transport. It’s as easy as 1-2-3!
Our Hybrid Lifts are the perfect solution for users with reduced mobility and are unable to operate a boom style hoist. There’s no docking device to connect, and no need to guide the mobility device into the vehicle, making it a quick and easy solution. And, our full range of models ensures the ideal combination of features to fit the vehicle, mobility device and user.

**Most Popular Features:**

- The AL600 is the most compact hybrid lift on the market! It requires only 109 cm of depth and 81 cm of headroom.
- Though compact, the AL600 still manages to offer the largest travel distance in its class, making this lift compatible with most enclosed vehicles, including SUVs!
- Installation uses existing seat mounts, requiring no drilling or vehicle modifications. Plus, the incredibly compact design allows the 2nd row seating to remain in place.

**Refined Hand Control**

Press just one button to operate the lift. The newly-designed hand controls are lighter weight, the buttons are easier to press, and their longer spiral cord makes operation even simpler. Plus, this new hand control allows power to be delivered directly to the motor, ensuring consistent speed in operation.

**Sure-Lok® Titan Retractors**

Available as an optional upgrade, Titan retractors allow the user to quickly secure the mobility device in seconds — using only one hand.
### AL600 Hybrid Platform Lift
- **Lifting Capacity**: 159 kg
- **Unit Weight**: 86 kg
- **Overall Height**: 81 cm
- **Overall Length**: 109 cm
- **Vertical Reach**: 85 cm
- **Platform**: 72 cm x 96.5 - 127 cm
- **Operation**: Straight Out/Down
